

Bineetbhusan Das

Senior Software Engineer — Java Backend | Distributed Systems · Microservices · AWS · System Design

Bhubaneswar, India • +91 7540844677 • bineetbhusandas@gmail.com • linkedin.com/in/bineetbhusandas • github.com/Bineetbhusandas

Professional Summary

Backend engineer with **4.5+ years** building **scalable, event-driven distributed systems** and **reusable frameworks** in Java / Spring Boot on AWS. Designed systems processing **300K+ shipments/day** with **exactly-once / idempotent** messaging, **CQRS read models**, **read/write DB separation**, and **caching** tuned for **~400 concurrent calls** in production. Strong in **system design (HLD/LLD)**, **concurrency (Java 21 virtual threads)**, and **clean-code quality** (SonarQube ≥95%, lowest team defect rate). Proficient in **AI-augmented engineering** (GitHub Copilot Agent Mode, Claude Code) — combining foundational system-design expertise with AI-era velocity to deliver production-grade architectures in compressed timelines. **MCA, 9.18 CGPA.**

Technical Skills

- **Languages:** Java (8 / 11 / 17 / 21), SQL
- **Frameworks:** Spring Boot 3.x, Spring MVC, Spring Data JPA, Spring Security, Spring AOP, Spring Cloud Function, Hibernate, MapStruct
- **Distributed / Cloud:** AWS Lambda, **SQS FIFO**, SNS, S3, Secrets Manager, EventBridge, X-Ray; Event-Driven Architecture, **CQRS**, Outbox Pattern, Idempotency
- **Concurrency & Performance:** Multithreading, **Java 21 Virtual Threads**, ExecutorService / CompletableFuture, **Caching (Caffeine / Redis)**, HikariCP, read/write replica routing, query optimization
- **Data:** MySQL, JPA / Hibernate, Flyway, Snowflake (integration)
- **Security:** Auth0, JWT, OAuth 2.0, RBAC, API-Key auth, data-level authorization
- **Quality / Tooling:** System Design (HLD/LLD), SonarQube, JaCoCo, JUnit, Mockito, Testcontainers, Swagger/OpenAPI, Git, CI/CD, Agile
- **Fundamentals:** OOP & SOLID, Design Patterns (Template Method, Strategy, Outbox, CQRS), Data Structures & Algorithms, RESTful API Design, Unit & Integration Testing, Linux
- **AI-Augmented Development:** GitHub Copilot Agent Mode, Claude Code — **pre-AI system-design depth + post-AI velocity**; used across design, implementation, code review, test generation, and documentation for production-grade quality at speed

Experience

Cozentus Technologies Pvt. Ltd. — *Client: PSA BDP (Global Logistics & Supply Chain)* | Bhubaneswar, India
Software Engineer → Senior Software Engineer (Java Backend) | Jan 2022 – Present

Integrated Track & Trace (ITT) — Multi-Modal Shipment Platform · **Module Lead**

Java 21 · Spring Boot 3.5 · AWS Lambda / SQS FIFO / SNS · MySQL (read-replica)

- Engineered a resilient **event-driven inbound/outbound pipeline** on **AWS Lambda + SQS FIFO + SNS** with **idempotency**, the **outbox pattern (zero message loss)**, FIFO ordering per shipment, DLQ-based failure isolation, and a **CQRS read model** for fast tracking reads.
- Designed and built the platform's **core backend framework** — **AOP-based read/write database routing** (replica vs primary), global exception handling, standardized response models, OpenAPI — adopted team-wide.
- Built a **configuration-driven search framework** (dynamic query engine, **20+ operators**, pagination/sorting) **reused across 19+ entities**, eliminating N+1 queries and cutting search dev time from hours to minutes.
- Built a **custom Caffeine caching framework** (stampede-safe, LRU, background refresh, Redis-swappable) on the **authorization** and read-heavy paths; tuned the service for **~400 concurrent calls / 300 DB connections** (read-write split) in production.
- Designed a **multi-layer security architecture** (Auth0 JWT + pluggable external auth + **3-level RBAC + query-level data isolation**) → **zero unauthorized data access.**

- Created a **plug-and-play scheduler framework** (Java 21 **virtual threads**, runtime DB control) **adopted across 7 modules**; pioneered **AI-driven development (Copilot Agent Mode)** across the SDLC. *Appraisal: 4.2 / Exceeds Expectations.*

Demurrage & Detention (D&D) — Charge Automation Platform · *Technical Lead*

Java · Spring Boot · AWS SQS · Auth0 · MySQL

- **Led end-to-end delivery** of a **greenfield** platform to production in **~4 months** (9-person team); designed backend architecture, DB schema, and a reusable common data-flow framework.
- Built the **Cost Calculator** and **Contract Matching** engines computing carrier charges for **~300K shipments/day** across **~100K contracts**, fed by an **event-driven AWS SQS** ingestion pipeline with transactional upserts + audit.
- Drove **SonarQube/SonarLint** adoption (**zero critical vulnerabilities**); **first Global Accounts Go-Live**, **zero critical defects**, direct client appreciation.

Smart Navigator — Ocean Tracking Platform (50+ carriers) · *Backend Engineer*

Java 17 · Spring Boot 3 · AWS Lambda · MySQL

- Re-architected carrier event processing **sequential** → **parallel** (Smart Batch + multithreading + async Lambda fan-out) across **50+ SCACs** for an estimated **~10–15× throughput**, with a **rate-limit-aware concurrency model**.
- Built serverless Lambdas (eURL push, ~99% reliability), **3 carrier adapters from scratch**, a **Predictive ETA service (Snowflake + JWT)**, and **independently** an **RPA framework** enabling **~16 no-API carriers** (~50–100K/day). Raised test coverage **~2–30% → 80%+**.

Key Achievements

- **High Achiever — 3 consecutive cycles** (FY23–24 / 24–25 / 25–26); **4 promotions** in ~4.5 years; **On-Spot Award (2026)**.
- Delivered the **first Global Accounts** production Go-Live; **mentored 10+** interns/new joiners; maintained the **lowest feature-to-bug ratio** on the team.

Education

- **MCA — Silicon Institute of Technology, Bhubaneswar (BPUT) — 2022 — CGPA 9.18**
- **BSc — F.M. University — 2020 — CGPA 8.14 | Languages:** English, Hindi, Odia
