

Bineetbhusan Das

Senior Software Engineer, Java Backend | Spring Boot · Microservices · Event-Driven · AWS

Bhubaneswar, India • +91 7540844677 • bineetbhusandas@gmail.com • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

Professional Summary

Senior Java Backend Engineer with **4.5+ years** building scalable, event-driven microservices and reusable frameworks for enterprise logistics platforms. Architected AWS pipelines (Lambda, SQS FIFO, SNS) processing **300K+ shipments and millions of tracking events per day** with idempotency and **zero critical defects**. Acted as **Module Lead / Lead Developer**, owning architecture and a 9-person team on greenfield go-lives. Combine deep systems fundamentals (concurrency, Java 21 virtual threads, CQRS, caching) with AI-augmented delivery. **3x High Achiever**, 4 promotions in 4.5 years, **MCA - 9.18 CGPA**.

Technical Skills

- **Languages & Core:** Java (8/11/17/21), SQL, OOP, SOLID, Design Patterns (Strategy, Template Method, Factory, Outbox, CQRS), Data Structures & Algorithms
- **Frameworks:** Spring Boot 3.5, Spring MVC / Data JPA / Security / AOP, Hibernate, MapStruct, Lombok, REST APIs
- **Cloud & Messaging:** AWS Lambda, API Gateway, SQS (FIFO), SNS, S3, RDS, Secrets Manager, IAM, EC2 / ECS; Event-Driven Architecture, Microservices, Distributed Systems, System Design (HLD/LLD), CI/CD (CodeBuild / CodePipeline / CodeCommit)
- **Concurrency & Performance:** Multithreading, **Java 21 Virtual Threads**, ExecutorService / CompletableFuture, async processing, Caffeine caching, HikariCP & connection-pool tuning, read/write datasource routing
- **Data & Security:** MySQL / SQL Server, Redis, JPA / Hibernate, Flyway; Auth0, JWT, OAuth 2.0, RBAC, data-level authorization
- **Quality & Tooling:** JUnit, Mockito, Testcontainers, SonarQube, JaCoCo, Swagger / OpenAPI, Maven, Git, JIRA, Azure Boards, Docker (working knowledge), Agile / Scrum, Linux
- **Working Knowledge:** Angular, TypeScript (frontend integration; primary focus is backend)
- **AI-Augmented Development:** agentic coding workflows using **GitHub Copilot (Agent Mode)**, **Claude Code**, and **Antigravity** for scaffolding, test generation against live contracts, and legacy refactoring, with full architectural ownership

Professional Experience

Senior Software Engineer (Java Backend), Cozentus Technologies Pvt. Ltd. | Bhubaneswar, India | Jan 2022 – Present

Client: PSA BDP (Global Logistics & Supply Chain). Career progression: Intern → Software Engineer → Senior Software Engineer (Java Backend).

Integrated Track & Trace (ITT), Multi-Modal Visibility Platform · *Module Lead*

Next-gen multi-modal (ocean / air / rail / road) tracking platform, Java 21, Spring Boot 3.5, AWS, MySQL.

- Architected the platform's reusable backend frameworks: AOP-based **read/write datasource routing** (CQRS-style), a multi-layer security model, a trace-ID exception framework, and the team's API design standards, adopted as the platform standard.
- Built a configuration-driven universal search framework reused across **19+ entities** with 20+ filter operators, cutting per-feature search development from **hours to minutes**.
- Designed a scalable User-Company access-control system (bulk-assignment engine, caching, lazy loading) handling **10K+ companies, reused by another team (SDM)**.
- Engineered an event-driven AWS Lambda + SQS FIFO + SNS pipeline with idempotency and the **outbox pattern (zero message loss)**, reliably processing **millions of tracking events/day**.
- Built a stampede-safe, **two-tier caching framework** (Caffeine local + Redis distributed for multi-instance consistency) and a Java 21 virtual-thread scheduler (reused across 7 modules), sustaining **~400 concurrent calls over 300 pooled DB connections**.
- Tuned database performance (index/query optimization, HikariCP pool sizing, batch/bulk processing) for fast reads/writes under high concurrency.

- Drove a prevention-first quality culture with peer reviews and JaCoCo across all backend projects, keeping the team's lowest feature-to-bug ratio (**SonarQube 85%+ coverage**).

Demurrage & Detention (D&D), Charge Automation Platform · Lead Developer

Greenfield carrier charge-calculation platform, Java 17, Spring Boot, AWS SQS, Auth0, MySQL.

- Led end-to-end delivery of a greenfield platform to production in **~4 months** with a **9-person cross-functional team**, owning backend architecture, database schema, and a reusable common data-flow framework standardized across modules.
- Designed the Cost Calculator (multi-currency) and Contract Matching engines that replaced a manual, error-prone process, automating carrier charge computation for **~300K shipments/day** across **~100K contracts**.
- Built an event-driven AWS SQS pipeline (shipment/container events + a parallel master-data sync stream) with transactional upserts and full audit logging; implemented RBAC + Auth0 SSO and CSV bulk upload with a staged approval workflow.
- Built a threshold-based alerting system (subscriptions + scheduled email) that notifies users of approaching or breached D&D charges, the platform's core cost-avoidance feature.
- Drove SonarQube/SonarLint adoption (zero critical vulnerabilities) and delivered the **first Global Accounts production Go-Live** with **zero critical defects** and direct client appreciation.

Smart Navigator, Ocean Tracking & Cargo Visibility · Backend Engineer

Enterprise ocean-tracking platform integrating 50+ carriers, Java 8–17, Spring Boot 3, AWS Lambda, MySQL.

- Re-architected carrier event processing from sequential to parallel: a Smart Batch engine (Java multithreading + async AWS Lambda fan-out) with a rate-limit-aware concurrency model across **50+ carrier SCACs**, increasing throughput an estimated **~10-15x**.
- Built **3 carrier adapters from scratch** (CMA CGM, CargoSmart, DCSA), enhanced the reusable **Template-Method** adapter framework, and normalized heterogeneous carrier responses into a common internal event model.
- Independently built an RPA-based tracking service and reusable adapter framework for **~16 no-API carriers** (~50-100K records/day); automated shipment discovery, carrier-call eligibility (Business Rule Engine), and retry.
- Delivered two partner integrations in opposite directions: an outbound serverless AWS Lambda that pushes passwordless tracking links (eURLs) out to a customer system (~10-15K shipments/day, ~99% reliability), and an inbound REST callback API letting carriers like Hapag-Lloyd push container-tracking events into the platform, tuned to handle **~200 concurrent requests**.
- Owned release engineering & production support with zero production-release issues over a year; raised test coverage **~30% to 85%+** and **mentored ~6 engineers**.

Key Achievements

- **High Achiever, 3 consecutive cycles** (FY 2023–24 / 24–25 / 25–26) and **4 promotions in ~4.5 years**.
- **CEO discretionary bonus** for delivering above designation; **On-Spot Award (2026)** for ownership and immediate business impact.
- Delivered the **first Global Accounts platform** to production; drove organization-wide adoption of **AI-augmented development**.

Education

- **MCA, Silicon Institute of Technology, Bhubaneswar (BPUT), 2022, CGPA 9.18**
- **BSc, F.M. University, 2020, CGPA 8.14**
