

Bineetbhusan Das

Senior Software Engineer | Java Backend | Spring Boot · Microservices · AWS Serverless

+91 7540844677 • bineetbhusandas@gmail.com • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

Professional Summary

Senior Java backend engineer with **4.5+ years** building REST APIs, microservices and AWS serverless applications on Java 8-21 and Spring Boot. Designed the event-driven pipeline behind **millions of events daily** on **AWS Lambda, SQS FIFO and SNS**, with idempotent processing and DLQ-based failure isolation, and own **50+ production REST endpoints** built on Spring Data JPA and Hibernate. Currently **Module Lead**; previously **Lead Developer**, delivering a greenfield platform to production in **~4 months** with a 9-person cross-functional team. **High Achiever for 3 consecutive cycles.**

Technical Skills

- **Core Java:** Java 8 / 11 / 17 / 21, OOP, SOLID, Design Patterns, Multithreading, **Java 21 Virtual Threads**, ExecutorService / CompletableFuture
- **Spring:** Spring Boot 3.x, Spring MVC, Spring Data JPA, Spring Security, Spring AOP, Spring Cloud Function
- **APIs & Microservices:** REST API design, **50+ production endpoints**, Swagger / OpenAPI, microservices, System Design (HLD/LLD)
- **AWS: Lambda, SQS (FIFO), SNS**, API Gateway, S3, RDS, IAM, Secrets Manager, EC2, ECS, VPC, CloudWatch, EventBridge, CI/CD (CodeCommit / CodeBuild / CodePipeline)
- **ORM & Data: Hibernate**, JPA, MySQL, SQL Server, Redis, Caffeine, HikariCP, SQL query optimization, indexing, read/write database routing
- **Event-Driven:** Event-Driven Architecture, Transactional Outbox Pattern, Idempotency, ordered consumption, DLQ failure isolation, CQRS · **Apache Kafka** (concepts): topics, partitions, consumer groups, offset management, delivery semantics
- **Security & Quality:** Auth0, JWT, OAuth 2.0, RBAC, query-level data isolation, JUnit, Mockito, Testcontainers, SonarQube, JaCoCo
- **Frontend & Tooling:** JavaScript, TypeScript, Angular (frontend integration; primary focus is backend), Docker, Git, Maven, Agile / Scrum, Linux
- **Currently learning:** AWS Step Functions, DynamoDB
- **AI-Augmented Development:** **Claude Code** and **GitHub Copilot** across design, implementation, test generation and refactoring, with changes verified through tests, static analysis and code review before merge

Professional Experience

Senior Software Engineer (Java Backend), Cozentus Technologies Pvt. Ltd. | Bhubaneswar, India | Jan 2022 – Present

Client: PSA BDP (US-based global logistics & supply chain). Progression: Intern → Software Engineer → Senior Software Engineer, growing from Backend Engineer to Lead Developer to Module Lead across three platforms.

Integrated Track & Trace, Multi-Modal Visibility Platform · **Module Lead**

Greenfield platform; Java 21, Spring Boot 3.5, AWS serverless, MySQL.

- Engineered the serverless event-driven pipeline (**AWS Lambda, SQS FIFO, SNS**) processing **millions of tracking events daily**, with ordered and idempotent consumption, DLQ-based failure isolation, and the **Transactional Outbox Pattern** for reliable event publication.
- Built the shared framework layer the platform runs on: read/write database routing, caching, security, exception handling, and REST API standards. Also resolved performance and reliability issues across these services.
- Architected a configuration-driven search framework on **JPA/Hibernate** (dynamic JPQL, 20+ filter operators, sorting, pagination, entity-specific joins) reused across **22+ entities**, cutting per-feature search development from **hours to minutes**.
- Optimized database access by matching caching to deployment topology: Caffeine for the single-instance scheduler and Redis for scale-out deployments, with targeted invalidation on data updates, TTL, and LRU eviction.
- Architected multi-layer security (Auth0 JWT, **3-level RBAC**, query-level data isolation) scoping every request to the user's authorized companies.

- Replaced stored-procedure-based shipment upload with a Java staging pipeline, eliminating N+1 queries and shipping with **zero critical defects** in QA.
- Shipped a Java 21 virtual-thread scheduler framework running **9 production modules**, replacing duplicated scheduling code with one configurable engine.

Charge Automation Platform (Demurrage & Detention) · *Lead Developer*

Greenfield product platform, Java 17, Spring Boot, AWS SQS, Auth0, MySQL.

- Led end-to-end development and production implementation of a greenfield platform in **~4 months** with a **9-person cross-functional team**, owning backend architecture and database design.
- Designed the multi-currency **Cost Calculator and Contract Matching engines** that replaced a manual process, automating charge computation for **300K+ shipments/day** across **~100K contracts**.
- Built the threshold alerting engine that warns operations before charges accrue, enabling proactive cost avoidance.
- Acted as primary technical contact for client, PM, BA and QA; drove SonarQube adoption and led the platform's **first production go-live** with **zero critical defects**.

Smart Navigator, Carrier Integration & Tracking Platform · *Backend Engineer*

Enterprise tracking platform integrating 50+ carriers, Java 8-17, Spring Boot 3, AWS Lambda, MySQL.

- Re-architected carrier polling across **50+ integrations** from sequential to controlled parallel execution, using per-carrier concurrency and rate-limit controls to achieve an estimated **10-15x** throughput gain.
- Owned **50+ production REST endpoints**, collaborating with the frontend team on API contracts and Swagger/OpenAPI documentation.
- Built a serverless **Spring Cloud Function Lambda** that replaced a manual daily Excel-and-email handoff, pushing tracking links to a customer system at **~10-15K shipments/day** and cutting data latency from once-daily to **under 15 minutes**.
- Built **3 carrier integrations** on a reusable Template-Method framework, plus an automated tracking service for **~16 carriers with no public API**. Onboarded and mentored **~6 new joiners**, enabling delivery of **~11 additional carrier adapters**.
- Owned end-to-end release management for a year, coordinating release packages, database migrations, client approvals, deployments, and rollback activities, with **zero release-related production issues**.

Key Achievements

- **High Achiever, 3 consecutive cycles** (FY 2023–24 / 24–25 / 25–26) and **4 promotions, most recently in Jun 2026**.
- **CEO discretionary bonus** for delivering beyond role expectations; **On-Spot Award (2026)** for ownership and immediate business impact.
- Led organization-wide adoption of **AI-augmented development** through org-level knowledge-transfer sessions.

Education

- **MCA, Silicon Institute of Technology, Bhubaneswar (BPUT)**, 2022, **CGPA 9.13**
- **BSc, College of Basic Science & Technology, Balasore (F.M. University)**, 2020, **CGPA 8.14**
