

Bineetbhusan Das

Senior Software Engineer — Java Backend | Spring Boot · Microservices · Event-Driven · AWS

Bhubaneswar, India • +91 7540844677 • bineetbhusandas@gmail.com • linkedin.com/in/bineetbhusandas • github.com/Bineetbhusandas • bineetbhusandas.github.io

Professional Summary

Senior Java Backend Engineer with **4.5+ years** building **scalable, event-driven microservices and reusable frameworks** for enterprise logistics platforms. Architected **AWS pipelines** (Lambda, SQS FIFO, SNS) processing **300K+ shipments and millions of tracking events per day** with idempotency and **zero critical defects**. Acted as **Module Lead / Technical Lead**, owning architecture and a **9-person team** on greenfield go-lives. Combine deep systems fundamentals — concurrency, **Java 21 virtual threads**, CQRS, caching, performance tuning — with **AI-augmented delivery** (GitHub Copilot Agent Mode, Claude Code). **3× High Achiever, 4 promotions in 4.5 years, MCA – 9.18 CGPA.**

Technical Skills

- **Languages & Core:** Java (8/11/17/21), SQL, OOP, SOLID, Design Patterns (Strategy, Template Method, Factory, Outbox, CQRS), Data Structures & Algorithms
- **Frameworks:** Spring Boot 3.5, Spring MVC / Data JPA / Security / AOP, Hibernate, MapStruct, Lombok, REST APIs
- **Cloud & Messaging:** AWS Lambda, SQS (FIFO), SNS, S3, Secrets Manager; Event-Driven Architecture, Microservices, CI/CD (CodeBuild / CodePipeline)
- **Concurrency & Performance:** Multithreading, **Java 21 Virtual Threads**, async processing, Caffeine caching, HikariCP & connection-pool tuning, read/write datasource routing
- **Data & Security:** MySQL / SQL Server, JPA / Hibernate, Snowflake (integration), Flyway; Auth0, JWT, OAuth 2.0, RBAC, data-level authorization
- **Quality & Tooling:** JUnit, Mockito, Testcontainers, SonarQube, JaCoCo, Swagger / OpenAPI, Maven, Git, JIRA, Agile / Scrum, Linux
- **AI-Augmented Development:** GitHub Copilot Agent Mode, Claude Code — design, scaffolding, test generation against live contracts, and legacy refactoring with full architectural ownership

Professional Experience

Cozentus Technologies Pvt. Ltd. — *Client: PSA BDP (Global Logistics & Supply Chain)* | Bhubaneswar, India
Software Engineer Intern → Software Engineer → Senior Software Engineer (Java Backend) | Jan 2022 – Present

Integrated Track & Trace (ITT) — Multi-Modal Visibility Platform · **Module Lead**

Next-gen multi-modal (ocean / air / rail / road) tracking platform — Java 21, Spring Boot 3.5, AWS, MySQL.

- Architected the platform's **reusable backend frameworks** — AOP-based **read/write datasource routing** (CQRS-style), centralized security, exception, logging and outbound-REST layers — adopted as the team-wide standard.
- Built a **configuration-driven universal search framework** reused across **19+ entities** with 20+ filter operators, cutting per-feature search development from hours to minutes and eliminating N+1 queries.
- Designed a scalable **User–Company access-control system** (bulk-assignment engine, caching, lazy loading) handling **10K+ companies** — **reused by another team (SDM)**.
- Engineered an **event-driven AWS Lambda + SQS FIFO + SNS pipeline** with **idempotency** and the **outbox pattern (zero message loss)**, reliably processing **millions of tracking events/day**.
- Built a **stampede-safe Caffeine caching framework** and a **Java 21 virtual-thread scheduler** (reused across 7 modules), sustaining **~400 concurrent calls over 300 pooled DB connections**.
- Drove **AI-augmented development** across the SDLC; maintained the team's lowest bug ratio (**SonarQube 85%+ coverage**). *Appraisal: 4.2 / Exceeds Expectations.*

Demurrage & Detention (D&D) — Charge Automation Platform · **Technical Lead**

Greenfield carrier charge-calculation platform — Java, Spring Boot, AWS SQS, Auth0, MySQL.

- **Led end-to-end delivery** of a greenfield platform to production in **~4 months**, coordinating a **9-person cross-functional team** and owning backend architecture and schema.
- Designed the **Cost Calculator** and **Contract Matching** engines computing charges for **~300K shipments/day** across **~100K contracts**.
- Built an **event-driven AWS SQS pipeline** with idempotent, transactional upserts; implemented **RBAC + Auth0 SSO**, CSV bulk upload and approval workflows.
- Delivered the **first Global Accounts production Go-Live** with **zero critical defects** and **direct client appreciation**.

Smart Navigator — Ocean Tracking & Cargo Visibility · *Backend Engineer*

Enterprise ocean-tracking platform integrating 50+ carriers — Java 17, Spring Boot 3, AWS Lambda, MySQL.

- Re-architected carrier event processing from **sequential to parallel** (multithreading + async Lambda fan-out) across **50+ carrier SCACs**, increasing throughput an estimated **~10–15x**.
- Built **3 carrier adapters from scratch** plus a reusable **RPA framework** enabling tracking for **~16 no-API carriers** (~50–100K records/day) and a **Snowflake**-integrated Predictive-ETA service.
- Built a serverless **AWS Lambda eURL service** (~10–15K requests/day, ~99% reliability) and a partner push API (Hapag-Lloyd).
- Raised test coverage from **~30% to 85%+** via a SonarQube initiative; **mentored 10+ interns and new joiners**.

Key Achievements

- **High Achiever — 3 consecutive cycles** (FY 2023–24 / 24–25 / 25–26) and **4 promotions in ~4.5 years** (Intern → Deputy Manager).
- **On-Spot Award (2026)** for ownership and immediate business impact; **CEO discretionary bonus** for delivering above designation.
- Delivered the **first Global Accounts platform** to production; drove organization-wide adoption of **AI-driven development**.

Education

- **MCA — Silicon Institute of Technology, Bhubaneswar (BPUT), 2022 — CGPA 9.18**
- **BSc — F.M. University, 2020 — CGPA 8.14**
- **Continuous learning:** HackerRank Java (5★); AWS Cloud Practitioner & Developer Associate (DVA-C02) coursework
